Isaac Hernandez

Founder & Studio Lead | Agentic Systems Engineer

Remote doesthisfeelright.com github.com/doesitfeelright

> Founder of **Does This Feel Right?**, pioneering **Agentic Systems Engineering**—building opinionated operating systems for hybrid human-AI teams. I architect multi-agent workflows, decision governance protocols, and verifiable AI systems that make small teams unusually effective through immutable decision ledgers and intelligent automation.

KEY ACHIEVEMENTS

- Built and deployed **Studio OS**—a production agentic operating system running a frontier studio with **4 specialized AI agents** handling research, content, and deployment
- Architected **Studio OS Copilot** with universal decision-capture across browser, mobile, IDE, and hardware surfaces
- Established AI engineering research lab publishing reproducible experiments on model performance, latency, and alignment
- Designed verifiable decision logging system with on-chain governance for trustless agent verification

PROFESSIONAL EXPERIENCE

Founder & Studio Lead

2024 - Present

Does This Feel Right? (Studio OS)

Remote

- Founded frontier studio operating on **Studio OS Protocol**—a forkable, verifiable specification for agentic governance
- Deployed **Frontier Team** of AI agents (Architect, Alchemist, Librarian, Operator) automating research, content generation, and deployment workflows
- Built multi-agent orchestration using Google Gemini, OpenAI, and Anthropic APIs with custom guardrails and workflow automation
- Developed static site generation system with AI-powered content pipeline, terminal UI (Textual), and automated CI/CD
- Created living reference implementation for AI-native organization design demonstrating agent architecture and human-AI collaboration patterns

AI Systems Architect & Engineer

2023 - 2024

Independent Projects

Remote

- Designed **agentic workflow systems** integrating multiple LLM providers (Gemini, GPT-4, Claude) with custom orchestration
- Built browser extensions and mobile interfaces for real-time decision capture and agent interaction
- Created automated content pipelines with quality guardrails and human-in-the-loop verification
- Implemented distributed AI architecture spanning Mac, Windows, and cloud nodes with WebSocket communication

TECHNICAL SKILLS

AGENTIC SYSTEMS & AI

- Multi-agent orchestration
- Google Gemini, OpenAI GPT-4, Anthropic Claude
- Workflow automation & guardrails
- Decision governance protocols
- Prompt engineering & model evaluation
- Verifiable logging & AI alignment

DEVELOPMENT & ARCHITECTURE

- Python (FastAPI, Flask), JavaScript/Node.js
- React & modern frontend frameworks
- System design & distributed systems
- WebSocket & real-time communication
- Browser extensions & mobile interfaces
- Event-driven architecture

DEVOPS & QUALITY

- GitHub Actions CI/CD
- Docker & containerization
- Automated testing & security scanning
- System telemetry & observability
- Git workflow & version control

PRODUCTS & OFFERINGS

- Studio OS Protocol (open specification)
- Autonomous System Designer
- Agentic OS Bootcamp (4-week program)
- Frontier Team as a Service
- Studio OS Copilot (universal interface)

CORE EXPERTISE

- **Agentic Systems Engineering:** Combining AI engineering, human-AI collaboration, computational organization theory, and AI governance
- **Decision Architecture:** Designing decision-making loops with clear policies for autonomy vs. human judgment

- **Verifiable Intelligence:** Implementing cryptographically verifiable decision logs and on-chain governance
- **Self-Evolving Systems:** Building systems that propose improvements based on failure data and compound authority over time
