Isaac Hernandez

AI Engineer & Creative Technologist isaacsight@gmail.com | doesthisfeelright.com

Professional Summary

Innovative engineer and creator of "Does This Feel Right?", a platform exploring the intersection of human experience and personal software. Specialist in **AI Agent Architecture**, **Distributed Systems**, and **Mechanistic Interpretability**. Proven track record of building autonomous web systems and advanced research tools for LLM alignment.

Core Competencies

- **AI & Machine Learning:** LLM Integration (OpenAI, Gemini, Anthropic), Local Inference (Ollama, Llama 3, Mistral), RAG Pipelines, Prompt Engineering, Mechanistic Interpretability.
- **Full Stack Development:** Python, JavaScript/TypeScript, React, Next.js, FastAPI, HTML5/CSS3, D3.js.
- **Infrastructure & Tools:** Distributed Architecture (Mac/Windows Node Clustering), Git, Supabase, Tailwind CSS, Lunr.js.
- **Concepts:** The Autonomous Web, Studio OS, Digital Frontier Teams, Personal Software.

Featured Projects

Studio OS (Does This Feel Right?) | *Architect & Lead Developer*

- Designed and built a custom **distributed AI publishing platform** encompassing a "Digital Frontier Team" of specialized AI agents.
- Implemented a hybrid architecture leveraging a local **Windows Studio Node** for heavy inference (Ollama) and cloud APIs (Gemini/OpenAI) for specific tasks, optimizing for cost and privacy.

- Developed a "system-level" approach to content creation, where AI agents assist in drafting, editing, and optimizing technical and philosophical essays.
- **Tech Stack:** Python, FastAPI, React, Ollama, Local Networking.

Logit-Level Alignment Analyzer | *Researcher & Developer*

- Created a precision debugging suite for analyzing **LLM output divergence**.
- Features real-time token diffing, logprob heatmaps, and millisecond latency profiling to understand model behavior at a granular level.
- **Tech Stack:** Next.js, OpenAI API, Anthropic API.

Transformer Dynamics Visualizer | *Developer*

- Built an interactive tool for exploring **sliding-window attention** and **BPE tokenization** mechanisms.
- Visualizes latent state preservation and causal masking to demystify Transformer architecture dynamics.
- **Tech Stack:** React, D3.js, Tiktoken.

The Recursive Platform | *Developer*

- Engineered a self-referential static site generator that analyzes its own architecture.
- Implemented a custom build system (`build.py`) that orchestrates the entire site generation and AI augmentation process.
- **Tech Stack:** Python, Static Site Generation (SSG), Tailwind CSS.

Philosophy & Writing

- Author of "Does This Feel Right?", a collection of essays on slowing down, noticing reality, and the philosophy of technology.
- Advocate for "Personal Software" that empowers individuals to own their digital infrastructure and data.
- Explores the balance between high-tech automation and human-centric living.
